CombiBurr

Demonstrating a continued commitment to innovation and excellence in the design and manufacture of Tungsten Carbide Burrs, the unique **New CombiBurr** offers users a level of versatility never before seen from a carbide burr.

The **CombiBurr** design is produced by bringing together an inverted cone and a ball shape onto one carbide burr, which is then suitable for use across a wide range of de-burring processes reducing the need for costly tool changes and minimising down-time.

To ensure the very highest levels of quality and consistently high performance, only specially selected Sintered Tungsten Carbide is used. The Special Tooth Geometry is manufactured by the very latest state-of-the-art CNC machines, controlled by our very own specially written programs.

The versatility of the **CombiBurr** means that it is suitable for use on a wide range of metals, alloys and other specialist materials including titanium, bronze, stainless steel, cast iron and brass.

CombiBurr – DN61220-2

Head Diameter	12.8mm
Head Length	20mm
Shank Diameter	6mm
Overall Length	63mm

**For Your Safety
Always Remember
to Wear**
